Background and Objectives

• AARP and ASHA have partnered to highlight needs for human communication, specifically to highlight issues relating to hearing among the 50+ US population.

• The poll outlines the “State of Hearing” among the 50+ generation. Poll topics center on:
  – Attitudes towards hearing help.
  – Needs and unmet needs that the 50+ population has for hearing help.
  – Knowledge of where to go for help as well as enablers and barriers to getting this help.

• This poll is a joint initiative of AARP and the American Speech-Language-Hearing Association. Project Directors:
  – Reginald Ray, AARP Services, Inc. (202) 434-7556 rray@aarp.org;
  – Joseph Cerquone, American Speech-Language-Hearing Association, (301) 296-8732 jcerquone@asha.org.

• This report is a summary of the overall findings of the poll. A supplemental report, which contains findings specific to minorities, is also available. This report shows that African-Americans are more likely than others to report that their hearing is “excellent” and Hispanics report the highest rates of untreated hearing issues.
Methodology

- The poll was conducted using two methodologies:
  - An online poll of 1,821 AARP members.
  - A telephone poll of 411 AARP members.
- The total sample size for this poll was 2,232.
- Sampling frames (lists) were provided by AARP, from the AARP membership database.
- Quotas were set by age group, gender, and race/ethnicity. These quotas ensure that the resulting study dataset closely matches the AARP membership universe on key demographic characteristics.
- The telephone poll was included to provide representation from members who do not have an email address on file.
- Study data were weighted to known parameters in the AARP membership database. The result is that study data are representative of the AARP membership.
- Data collection occurred from September 13 to 26, 2011. The online and telephone poll occurred simultaneously and the content of the two polls were identical.

Summary/Key Findings
Summary/Key Findings

The State of Hearing Health

• Maintaining hearing health as one ages is seen as a very important health concern among older Americans. It contributes closely to their quality of life. For example, 70% of respondents who say their hearing is excellent also say they feel younger than their actual age while 59% of those with untreated hearing issues say they feel younger than their actual age. A large majority (76%) say their hearing health is of great importance to them personally.

• However, despite the recognition of the importance of hearing health, almost half (47%) of respondents reported having untreated hearing health issues. This means that of the 99 million U.S. adults who are age 50+, about 46 million have untreated hearing issues. Also, males are more likely to have untreated hearing issues than females.

• There is a widespread recognition among older Americans that their hearing is getting worse. The most common issue reported is having trouble hearing amidst background noise and many say they have to strain to hear conversations.

• Most older Americans fail to get a hearing test. Just 43% had gotten a hearing test in the past five years, less than half the percentage who have gotten vision tests. Hearing testing ranked next to the bottom in terms of number of respondents who reporting getting health tests over the past five years. Men are more likely to get their hearing checked than women.

• Men are also more likely to use hearing aids than women, but the poll showed very little use of hearing aids before the age of 70.
While most wearers of hearing aids feel that they enhance the quality of their life, many hearing aid owners are not consistently wearing them. The most common complaint about hearing aids is that they don’t work well in a crowded room, which corresponds to the number one hearing issue to result from the polling -- not being able to hear with noise in the background.

It appears that hearing issues are difficult to discuss with loved ones. Only 60% of respondents who know a family member or a friend with a hearing issue have recommended seeking treatment to them.

Do people feel that hearing health issues merit more attention?

A large majority of older Americans (68%) feel that hearing health issues do not receive enough attention compared to other health concerns. Nearly 40% are not willing to discuss hearing difficulties with family or friends.

What are the consequences of hearing difficulties?

Hearing difficulties are affecting the quality of life for older Americans. Many report having problems following conversations in noisy situations.

Hearing difficulties are also affecting relationships – relationships with family and friends as well as social situations such as family gatherings. Many (44%) poll respondents strongly agree or agree that hearing difficulties can negatively impact their relationships with their families and friends.
Summary/Key Findings

Continued

• Also, approximately one third are concerned that hearing difficulties could affect their effectiveness at work, while more than one fifth say they make them feel cut off from family and friends.

• However, people are reticent to discuss hearing difficulties with their families and loved ones. They are most likely to discuss hearing difficulties with their primary care physician.

• Older Americans get a bit defensive when asked about hearing difficulties. They claim not to be withdrawing from conversations and that hearing challenges do no limit their activities. They don’t see hearing issues as presenting a problem for them at work.

What prevents people from getting treatment for hearing health issues?

• Respondents have many reasons for not seeking treatment. Fifty-seven percent of those with untreated hearing problems say their problems don't warrant treatment and are easy enough to ‘cover up.” The foremost reason for not seeking treatment is a perception that their hearing issue isn’t severe enough – that they are getting by without treatment. They seem to have found ways that they believe cover up their hearing issues, and do not see a connection to an improved quality of life that treatment may provide.

• However, a large majority(63%) cite health insurance coverage limitations, concerns about cost, and lack of health insurance as reasons for not seeking treatment. Also, 65% report they would seek treatment for hearing problems if they were sure they could afford to do so.

• There is not a large stigma to hearing health issues. Older Americans seem largely unconcerned about others knowing they have hearing issues, which provides a contrast to their reticence to discuss hearing issues with loved ones.
What will motivate more people to seek treatment for hearing health issues?

- Ultimately, it seems that more people will seek help for hearing issues if their issue is linked to their relationships. Nearly 70% would seek treatment if they felt it was affecting their relationships with family and friends. Nearly as many would do so if someone they cared about asked them to seek treatment.

- Cost and affordability is also a key issue. The study indicated concerns over costs and health care coverage for hearing treatment.

- Nearly 75% of respondents report that finding a provider with a high level of training in hearing difficulties is critically important to them were they to see professional help. However, their first stop appears to be their primary care physician, with a referral to an audiologist. The Internet is a key source for information, and local events and TV are seen as effective ways to communicate the importance of hearing checkups.
What is the State of Hearing Health?
Older Americans attach a high level of importance to maintaining their hearing health. Women seem to recognize the importance of hearing health at a younger age than men.

As you age, how important is maintaining your hearing health to the quality of your life?

- Extremely/very important, 85%
- Somewhat important, 14%
- Not very/not important at all, 1%

% Extremely/very important by age:
- 50-54: 92%
- 55-59: 86%
- 60-64: 87%
- 65-69: 88%
- 70-74: 91%
- 75+: 91%

Q215 All respondents (n=2,232)
Yet, significant numbers of older Americans report having untreated hearing health issues. 47% report having untreated hearing issues. This translates to more than 46 million people.*

% with untreated hearing difficulties

*Note: According to the 2010 census, there are 99 million + US adults aged 50 or older.

Q240 All respondents (n=2,232)
46% say their hearing is getting worse
Men are more likely than women to say their hearing is getting worse

How would you describe your hearing compared to 5 years ago?

% much worse/a little worse

Q245 All respondents (n=2,232)

Males
Females

50-54 55-59 60-64 65-69 70-74 75+
38% 32% 40% 41% 38% 55%
37% 40% 50% 51% 50% 55%

The same, 52%
The most common hearing issue is having difficulty hearing when there is background noise.

Please check “yes” or “no” to indicate if the following statements are true for you.

% Yes

- I have difficulty hearing when there is noise in the background. 57%
- I sometimes have to strain to understand a conversation. 48%
- It is hard for me to follow a conversation when two or more people talk at once. 37%
- I sometimes misunderstand what others are saying and respond inappropriately. 35%
- Many people I talk to seem to mumble (or not speak clearly). 33%
- A family member or friend often has to repeat what other people say to me so I can understand. 30%
- I hear a ringing, roaring, or hissing sound a lot. 29%
- Other people, such as my friends and family, often suggest that I might have difficulty hearing. 29%
- People complain that I turn the TV volume up too high. 29%
- I have difficulty understanding the speech of women and children. 25%
- I avoid interacting with others because I can’t hear them as well as I would like to. 13%

Q255 All respondents (n=2,232)

62% among males; 51% among females
Just 43% of respondents have had a hearing test in the past 5 years

Which have you had in the past 5 years?

- Vision test: 88%
- Blood pressure monitoring: 85%
- Mammograms (% of females): 85%
- Cholesterol screening: 81%
- Prostate exam (% of males): 77%
- Vaccinations (e.g. flu shots): 71%
- Colonoscopy: 58%
- Hearing test: 43% (42% among those with an untreated hearing issue.)
- Bone density test: 40%
Men are more likely to get a hearing test than women

Likelihood to get a hearing test rises with age

Which have you had in the past 5 years?

% who have had a hearing test

- Males
- Females

Q200 All respondents (n=2,232)
Men are more likely to own hearing aids than women

% of Respondents who own hearing aids

Q275 All respondents (n=2,232)
Few use other types of hearing assistive technologies

% of Respondents who own other hearing assistive technologies*

* Other hearing assistive technologies include FM systems, infrared systems, induction loop systems, one-to-one communicators, amplified telephones, and TV ears.
Hearing issues largely go undiagnosed and untreated, particularly at the younger portion of the age range surveyed.
While most wearers feel hearing aids enhance their quality of life, many owners (39%) do not consistently wear them.

Questions asked among those with hearing aids:

- How frequently do you wear your hearing aids?
  - Rarely, if ever, 11%
  - When I feel I need them, 28%
  - During all or most of the time I am awake, 61%

- How would you rate the quality of your life since you have been wearing hearing aids?
  - Much/somewhat worse, 4%
  - About the same, 23%
  - Much/somewhat better, 73%

- How would you rate your satisfaction with your hearing aids?
  - Not very/not satisfied at all, 18%
  - Somewhat satisfied, 40%
  - Extremely/very satisfied, 42%
The most common complaint about hearing aids is that they don’t perform as well as expected in a crowded room.

Why are you less than fully satisfied with your hearing aids?

Q295 Dissatisfied with hearing aids (n=237)
Just 60% of those who have a family member with a hearing difficulty have suggested they get treatment
Respondents are most likely recommend that someone with hearing difficulty go to a specialist

What have you suggested a person with hearing difficulty do?

*Among those who have suggested someone get treatment*

- Go to a physician that specializes in hearing issues (an otolaryngologist, ENT, or otologist) 57%
- Go to their primary care doctor 44%
- Go to an audiologist 43%
- Go to a hearing instrument (hearing aid) specialist 27%
- Go to someone at a retail store or pharmacy 2%

Q267 Have suggested someone get treatment for a hearing difficulty (n=911)
Do people feel that hearing health issues merit more attention?
Respondents feel that the importance of getting a hearing checkup does not get enough attention

In your experience, does the importance of getting a regular hearing check-up get …?

- Insufficient attention compared to other health concerns, 68%
- About the right amount of attention compared to other health concerns, 30%
- Too much attention compared to other health concerns, 2%

Q210 All respondents (n=2,232)
Hearing health is seen as an important personal concern

In your opinion, how important of a concern is hearing health to ...?

- **You personally**: 76% Extremely/very important concern, 16% Somewhat important concern, 8% Not a very important concern/not a concern at all
- **People aged 50 and older**: 73% Extremely/very important concern, 23% Somewhat important concern, 4% Not a very important concern/not a concern at all
- **Your close family members/friends**: 70% Extremely/very important concern, 22% Somewhat important concern, 8% Not a very important concern/not a concern at all
- **The US population in general**: 48% Extremely/very important concern, 33% Somewhat important concern, 19% Not a very important concern/not a concern at all

Q205 All respondents (n=2,232)
What are the consequences of hearing difficulties?
Hearing difficulties make it hard for people to follow conversations in noisy situations

How much do you agree or disagree with the following statements?

*I find it hard to follow conversations in noisy situations.*

- Strongly agree/agree, 61%
- Neutral, 12%
- Strongly disagree/disagree, 26%
Hearing difficulties can affect relationships with family and friends

How much do you agree or disagree with the following statements?

Hearing difficulties can negatively impact my relationships with my family and friends.

- Strongly disagree/disagree, 34%
- Strongly agree/agree, 44%
- Neutral, 22%

Family gatherings are a strain because so many people are talking at once.

- Strongly disagree/disagree, 36%
- Strongly agree/agree, 43%
- Neutral, 22%

Q500 Admit they have some hearing difficulty (n=1,514)
Many are willing to talk to medical professionals about hearing issues, but few are willing to talk to family members.

Who would you be likely to talk to if you felt you had difficulty with your hearing?

- **Your primary care doctor**: 65% (All respondents), 70% (Those with untreated hearing issues)
- **A physician who specializes in hearing issues (an otolaryngologist, ENT, or otologist)**: 52% (All respondents), 50% (Those with untreated hearing issues)
- **An audiologist**: 40% (All respondents), 35% (Those with untreated hearing issues)
- **A family member**: 23% (All respondents), 25% (Those with untreated hearing issues)
- **A hearing instrument (hearing aid) specialist**: 20% (All respondents), 17% (Those with untreated hearing issues)
- **A friend**: 14% (All respondents), 15% (Those with untreated hearing issues)
- **Someone at a retail store or pharmacy**: 2% (All respondents), 2% (Those with untreated hearing issues)

Q230 All respondents (n=2,232)
Older Americans are not likely to withdraw from situations, activities, or conversations because of hearing issues

How much do you agree or disagree with the following statements?

<table>
<thead>
<tr>

</tbody>
</table>

Q500 Admit they have some hearing difficulty (n=1,514)
Most respondents are **not** concerned that hearing difficulties could potentially affect their work lives

Questions asked among those who are currently employed

**Revealing my hearing difficulty could cause me problems in my job.**

- Strongly agree/agree, 11%
- Neutral, 17%
- Strongly disagree/disagree, 72%

**Would you be concerned that hearing difficulties would hurt your ability to remain employed?**

- Yes, 21%
- No, 79%

**Would you be concerned that hearing difficulties would reduce your effectiveness at work?**

- Yes, 32%
- No, 68%
Smaller percentages of older Americans report other consequences of not being able to hear well

How much do you agree or disagree with the following statements?

- Not being able to hear well affects my safety: 33% strongly agree/agree, 22% neutral, 45% strongly disagree/disagree
- I tend to bluff or pretend I hear and understand conversations: 32% strongly agree/agree, 19% neutral, 49% strongly disagree/disagree
- I feel cut off from my family and friends because I can't hear them as well as I would like to: 21% strongly agree/agree, 19% neutral, 60% strongly disagree/disagree
- It is uncomfortable to talk with others about not being able to hear as well as I would like: 17% strongly agree/agree, 17% neutral, 65% strongly disagree/disagree
What prevents people from getting treatment for hearing health issues?
Respondents give a number of reasons for not getting treatment for hearing difficulties

Earlier, you said that you have hearing difficulties but have not been treated for them. What are the main reasons why you haven’t sought treatment for your hearing difficulty?

• “The costs. The price of seeing a doctor is very costly these days.”
• “I haven’t sought treatment because I don’t feel it’s bad enough. I have also heard that hearing aids don’t work.”
• “I don’t have the money and I have Medicaid which doesn’t pay for it.”
• “I’m really not that bad. Every now and then things get a little fuzzy with my ears but mostly sometimes my ears get blocked up from the wax and that makes it a little hard to hear things.”
• “I have more important health issues than checking my hearing.”
• “When I went to an ENT doctor and had my hearing tested, he told me I had hearing loss but that all men my age start losing their hearing. He told me it was just another difficulty with aging. He did nothing. He made me feel as if I had wasted his time. I have not had my hearing tested again since then.”
• “I’m just not ready I guess. I don’t drive so finding a way is hard sometimes. I went with a friend one time and they had such a hard time with them that it just turned me off to it.”
• “I just have them repeat what they say to make sure I know what they are saying.”
• “Because it is occasionally that I don’t hear something correctly or have to ask somebody to repeat.”
A perception that hearing difficulties are easy to live with prevents treatment
Respondents are also concerned about costs and health care coverage

Which might prevent you from getting help for your hearing difficulty?

- Minor hearing difficulties are easy enough to live with untreated: 36% (All respondents), 58% (Those with untreated hearing issues)
- My health insurance doesn’t sufficiently cover the cost of treatment for hearing difficulties: 28% (All respondents), 29% (Those with untreated hearing issues)
- Treating hearing difficulties would cost too much: 27% (All respondents), 33% (Those with untreated hearing issues)
- I am so busy dealing with other health issues that I don’t focus on hearing difficulties: 12% (All respondents), 18% (Those with untreated hearing issues)
- I am not sure which type of health provider to go to: 10% (All respondents), 14% (Those with untreated hearing issues)
- I am not sure where to go for information: 8% (All respondents), 11% (Those with untreated hearing issues)
- I don’t have health insurance: 8% (All respondents), 9% (Those with untreated hearing issues)
- I don’t think I can keep track of what I need to do to use hearing aids successfully: 3% (All respondents), 3% (Those with untreated hearing issues)
- I don’t think I have the physical ability I would need to successfully use a hearing aid or other device: 2% (All respondents), 2% (Those with untreated hearing issues)
- I don’t have transportation: 2% (All respondents), 2% (Those with untreated hearing issues)

Q305 All respondents (n=2,232)
Many feel that their hearing problem isn’t severe enough to treat, or is easy enough to “cover up”

How much do you agree or disagree with the following statements?

- My hearing is fine in some situations, so I don’t feel I need treatment.
  - 43% Strongly agree/agree
  - 21% Neutral
  - 36% Strongly disagree/disagree
  
- Unless I feel my hearing difficulty is severe, I am unlikely to want to be treated for it.
  - 37% Strongly agree/agree
  - 15% Neutral
  - 48% Strongly disagree/disagree
  
- It is easy to find ways to cover up some hearing difficulties.
  - 24% Strongly agree/agree
  - 29% Neutral
  - 47% Strongly disagree/disagree

Q310 All respondents (n=2,232)

57% of those with untreated hearing issues agree with this statement.

55% of those with untreated hearing issues agree with this statement.
Respondents do not tend to feel that there is a stigma to having hearing issues as one ages

How much do you agree or disagree with the following statements?

- Admitting I have difficulty hearing is admitting that I am getting old.  
  - Strongly agree/agree: 22%  
  - Neutral: 15%  
  - Strongly disagree/disagree: 64%

- In our society, you don’t want others to know you have difficulty hearing.  
  - Strongly agree/agree: 16%  
  - Neutral: 18%  
  - Strongly disagree/disagree: 66%

- I don’t want my hearing tested because I don’t have the means to do anything about it.  
  - Strongly agree/agree: 14%  
  - Neutral: 14%  
  - Strongly disagree/disagree: 72%

- I wouldn’t want other people to see me wearing hearing aids.  
  - Strongly agree/agree: 13%  
  - Neutral: 16%  
  - Strongly disagree/disagree: 71%

- Most people have hearing difficulty as they get older, so it’s not important to get treated.  
  - Strongly agree/agree: 13%  
  - Neutral: 15%  
  - Strongly disagree/disagree: 73%

- I feel uncomfortable talking about having difficulty hearing.  
  - Strongly agree/agree: 10%  
  - Neutral: 16%  
  - Strongly disagree/disagree: 73%
What will motivate more people to seek treatment for hearing health issues?
People are compelled to seek help for hearing issues if they feel their issues limit their relationships

How much do you agree or disagree with the following statements?

I would be more likely to seek treatment for a hearing difficulty if …?

- I felt it was limiting my relationship with my family and friends.  
  - Strongly agree/agree: 68%
  - Neutral: 13%
  - Strongly disagree/disagree: 19%

- Someone I cared about urged me to seek treatment
  - Strongly agree/agree: 63%
  - Neutral: 22%
  - Strongly disagree/disagree: 15%

- I felt that treating difficulty hearing would cause me to be less of a burden on my family
  - Strongly agree/agree: 59%
  - Neutral: 21%
  - Strongly disagree/disagree: 20%

- My grandchildren asked me to seek treatment. (Among those with grandchildren)
  - Strongly agree/agree: 50%
  - Neutral: 24%
  - Strongly disagree/disagree: 27%

Q400 All respondents (n=2,232)
People will also be likely to seek treatment if they see it as affordable
