In the fall of 2008, the American Speech-Language-Hearing Association (ASHA) conducted a survey of audiologists. This survey was designed to provide information about salaries, working conditions, and service delivery as well as to update and expand information gathered from previous Audiology and Omnibus Surveys.

The results are presented in a series of reports. This report is based on responses from audiologists in private practice.

**Highlights:**

- 40% were owners of a private practice.
- 74% received an annual salary.
- 43% held an AuD degree.
- 43% worked in a suburban area.
- Median salary for self-employed owners was $91,000.
- Median annual salary for employees with 26 or more years’ experience was $75,000. Their median hourly wage was $43.00.
- Median annual salaries were highest in the Northeast and Midwest for owners ($100,000) and in the West for employees ($84,000).
- 41% of owners and 36% of employees said that ASHA was doing an excellent or good job in serving its members.
- 94% of owners and 88% of employees provided fitting and orientation of hearing aids.
- 16% of owners and 10% of employees said they were very qualified to provide services to multicultural populations.
The data in this report were gathered from 2,380 audiologists who indicated on the 2008 Audiology Survey that they worked in a private practice setting. Of that group:

- 40% were owners.
- 38% were full-time salaried employees.
- 15% were part-time salaried employees.
- 8% were contractors/consultants (e.g., per diem, temporary).

- 43% were self-employed in a private practice.
- 40% were employed in a private practice owned by nonaudiologists.
- 15% were employed in a private practice owned by other audiologists.

- 74% received an annual salary.
- 26% received an hourly wage.

- 88% worked in a nonresidential health care facility.
- 5% worked in hospitals.
- 3% worked in schools.
- 2% worked in colleges/universities.
- 1% worked in industry.
- 1% worked in an “other” facility.

- 49% held a master’s as highest degree.
- 43% held an AuD degree.
- 7% held a PhD degree.
- 1% held an “other” doctorate.

- 94% were clinical service providers.
- 3% were administrators, supervisors, or directors.
- 2% were college/university faculty.
- 2% had an “other” function.
Region of the Country
♦ 36% worked in the South.
♦ 26% worked in the Northeast.
♦ 20% worked in the Midwest.
♦ 18% worked in the West.

Population Setting
♦ 43% worked in a suburban area.
♦ 39% worked in a metropolitan/urban area.
♦ 18% worked in a rural area.

* May select only one response. ** May select more than one response

What They Earn:
Annual Salaries

The salaries in this report are median salaries (the one in the middle when salaries are ordered from lowest to highest). The salaries in this section (i.e., annual salaries) are only for respondents who reported that they worked in private practice full-time for 11 to 12 months a year. In most cases, salaries are presented separately for owners and full-time employees (i.e., salaried employees, contractors, consultants, per diems, and temps). Salaries are presented only when there are sufficient cases, that is, a minimum of 25 respondents.

The median salary for owners was $92,000 ($N = 599). The median for employees was $70,000 ($N = 732).

Owners received higher average salaries than did employees (see Table 1).

<table>

<td>142</td>
</tr>
<tr>
<td>Non-audiologists</td>
<td></td>
<td>13</td>
<td>70,000</td>
<td>515</td>
</tr>
</tbody>
</table>
The median salary was $11,000 higher for employees with an AuD than for those with a master’s. For owners, there was no difference. Salaries for both owners and employees were highest for audiologists with a PhD (see Table 2).

</tr>
<tr>
<td>PhD</td>
</tr>
</tbody>
</table>

The median number of years of experience was 14 for full-time employees and 25 for owners. Median salaries for owners increased from $65,016 (6-10 years) to $100,000 (26 or more years; see Table 3).

<table>
<thead>
<tr>

  West: AZ, CO, ID, MT, NV, NM, UT, WY, AK, CA, HI, OR, WA

As population density increased from rural to urban, so did median salaries. This was true for both owners and employees (see Table 5).

What They Earn: Hourly Wages

Owner or Employee

Of those who reported receiving an hourly wage, the median number of hours that owners worked per week was 30 (N = 110). The median number of hours worked was 40 (N = 134) for full-time employees, 20 for part-time (N = 213), and 24 for contractors (N = 103).

Owners reported a median hourly wage of $48.98 (N = 112), while employees reported a median wage of $33.00 (N = 231).

Private Practice Type

The median wage for private practice owners who were self-employed was $48.98. The median wage for audiologists who defined themselves as being self-employed in a private practice as well as being an employee was $50.00. Audiologists employed in private practices owned by other audiologists had a higher median hourly wage than those who worked in private practices owned by nonaudiologists (see Table 6).

<table>
<thead>
<tr>
<th>Table 6. Median Hourly Wages by Private Practice Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Private Practice Type</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>Self-employed</td>
</tr>
<tr>
<td>Owned by other audiologists</td>
</tr>
<tr>
<td>Owned by nonaudiologists</td>
</tr>
</tbody>
</table>
Median hourly wages for employees increased with experience, although not in a straight line, from $30.00 to $43.00 (see Figure 1). Median wages for owners were only available for audiologists with 11 to 15 years of experience and with 26 or more years ($50.00 each) because of small numbers reporting the other years of experience.

![Figure 1. Median Hourly Wages for Employees by Years of Experience](image1)

\[ N = 229 \]

Median hourly wages for employees ranged from $25.73 in the Midwest to $39.00 in the Northeast. The median hourly wage for owners was $50.00 in the two regions where there were sufficient respondents to report (see Figure 2).

![Figure 2. Median Hourly Wages by Region of the Country](image2)

\[ N = 302 \]
Median hourly wages for employees were lowest in rural areas and highest in suburban areas. Medians were also highest for owners in the suburbs (see Figure 3).

Owners with an AuD degree earned an average of nearly $8.00 per hour more than those with a master’s. Employees with an AuD degree earned nearly $3.00 an hour more than employees with a master’s (see Figure 4). Too few audiologists with PhDs reported hourly salaries to be included in the analysis.
For years, the first question on the Audiology Survey and other major ASHA surveys has inquired about the kind of job the Association is doing in serving its members. Overall, 3% gave ratings of excellent and 36% selected good. More owners than employees selected responses of excellent or good (see Figure 5).

Three services (i.e., counseling, demonstration/fitting/orientation of assistive technology, and fitting and orientation of hearing aids) were provided by more than 80% of owners and employees. The service that was selected least often by both owners and employees was telepractice.

The rate at which owners and employees provided services was significantly different for 10 of the 14 services. Owners were more likely than employees to provide 7 services (e.g., 33% of owners provided auditory training compared with 22% of employees who provided this service). On the other hand, employees were more likely than owners to provide 3 services (see Table 7).
### About Serving Multicultural Populations

Overall, 13% of the private practice audiologists who responded said that they were very qualified to provide services to multicultural populations. Owners differed from employees \((p = .005)\), with 16% of owners and 10% of employees giving themselves this rating.

### About Social Networking Sites

The mean number of social networking sites such as Facebook, MySpace, and LinkedIn on which private practice audiologists had an account or profile was 0.4. However, employees had more than twice as many sites \((0.5)\) as owners \((0.2; \ p = .000)\).

<table>

\(N \geq 2,034\)
About Ethics

The survey included three questions about ASHA’s Code of Ethics.

- **How relevant is the Code to your work?**
  - 59% said the Code was very relevant.
  - Owners’ responses were very similar to employees’ responses ($p = .573$).

- **In general, how out of touch is the Code with workplace realities?**
  - 9% overall selected very out of touch.
  - 11% of owners and 7% of employees selected very out of touch ($p = .000$).

- **How thorough is the Code?**
  - 23% overall said the Code was very thorough.
  - 27% of owners and 20% of employees selected very thorough ($p = .000$).

About Bundling of Charges

Private practice audiologists were split nearly evenly on how their practice charged: 49% bundled all charges, and 51% charged separately for professional services and devices (see Figure 6).

![Figure 6. Private Practice Charges](image)

$N = 2,222$
The 20-year-old ASHA Omnibus Survey has been retired, replaced by surveys specific to work settings and/or professions in order to better meet affiliates’ needs. The 2008 Audiology Survey is one of the replacements and melds topics from both the Omnibus Surveys and previous Audiology Surveys.

A stratified random sample was used to select 4,000 ASHA-certified audiologists for this survey from a population of 6,652 audiologists. They were stratified on the basis of type of facility and private practice.

The survey was mailed in August 2008. Second and third mailings followed, at approximately 4-week intervals, to individuals who had not responded to earlier mailings.

Of the original 4,000 audiologists in the sample, 17 had undeliverable addresses, 1 was deceased, 5 were retired, 7 were no longer employed in the field, and 5 were ineligible for other reasons, leaving 3,965 possible respondents. The actual number of respondents was 2,181, resulting in a 55.0% response rate.

Because facilities with fewer audiologists (such as schools) were oversampled and those with many (e.g., hospitals) were undersampled, weighting was used when presenting data to restore all groups to their actual proportion in the population of ASHA audiologists. The results presented in this report are the estimated values for the population of 6,652 from which the sample was drawn.

Results from the 2008 Audiology Survey are presented in a series of reports:

- Annual Salaries
- Hourly Salaries
- Clinical Focus Patterns
- Private Practice
- Survey Summary Report
- Survey Methodology, Respondent Demographics, and Glossary

Thank You

ASHA would like to thank the audiologists who received the 2008 Audiology Survey and completed it. Reports like this one are only possible because people like you participated. If you find this information valuable, please accept the invitation to participate in other ASHA-sponsored surveys and focus groups. You are the experts, and we rely on you to provide data to share with your fellow members.

Additional Information

For additional information regarding the 2008 Audiology Survey, please contact Pam Mason, Director of ASHA’s Audiology Professional Practices, at 301-296-5790; e-mail: pmason@asha.org. To learn more about how the Association is working on behalf of ASHA-certified audiologists, members may visit ASHA’s Web site at www.asha.org/members/aud/default.
