Executive Summary

The American Speech-Language-Hearing Association (ASHA) conducted a survey of speech-language pathologists (SLPs) in the spring of 2021. The survey was designed to provide information about health care–based service delivery and to update and expand information gathered during previous SLP Health Care Surveys. The results are presented in a series of reports.

This report addresses only questions on the survey pertaining to annual salaries. Data are drawn from six categories of health care facilities: general medical, Veterans Affairs (VA), military, long-term acute care, or university hospitals; home health agencies or clients’ homes; outpatient clinics or offices; pediatric hospitals; rehabilitation (rehab) hospitals; and skilled nursing facilities (SNFs).

Highlights

- 36% of respondents received an annual salary.
- 92% of SLPs who earned an annual salary were employed full time.
- The median annual salaries were
  - $78,000 for SLPs who were primarily clinical service providers,
  - $92,000 for those who were primarily administrators or supervisors but who did see some patients, and
  - $105,000 for those who were exclusively administrators or supervisors.
- The lowest and highest median annual salaries by various predictor variables were as follows:

  By facility type:
  - $77,000 in outpatient clinics or offices
  - $91,000 in SNFs

  By geographic region:
  - $79,830 in the Northeast
  - $90,000 in the West

  By years of experience:
  - $64,000 for SLPs with 1–3 years of experience
  - $95,000 for SLPs with 25 or more years of experience
Salaries

The SLPs who responded to the survey demonstrated diversity in both salary basis (annual/hourly/per visit) and status (full time/part time). In addition, differences in function, facility, region of the country, and other similar characteristics had an impact on their wages.

Salary Basis

Of the SLPs who responded to the ASHA 2021 Health Care Survey, 36% reported that they received primarily an annual salary. The remainder were paid primarily on a per-hour or per-home-visit basis (see Figure 1).

Note. $n = 1,574$.  

Figure 1: Salary Basis

- Annual: 36%
- Hourly: 54%
- Per home visit: 10%
Among all the respondents, 72% worked full time. However, among those who earned an annual salary, 92% worked full time (see Figure 2 and Appendix, Table 1).

**Figure 2: Employment Status of SLPs Who Earn an Annual Salary**

- **Part time**: 8%
- **Full time**: 92%

*Note. n = 559.*

The overall median salary for SLPs who were employed full time and who worked in a health care facility was $80,000 (see Appendix, Table 2).

Traditionally, ASHA has reported median salaries as a function of various demographic characteristics: facilities, years of experience, region of the country, and others. A minimum of 25 individuals must have answered a particular question for the relevant data to be presented.

The median full-time annual salary for SLPs who were primarily clinical service providers was $78,000. The median ranged from a low of $75,000 for those in outpatient clinics or offices to a high of $80,000 for SLPs in general medical, VA, military, LTAC, or university hospitals ($p = .034$; see Appendix, Table 3).

The median full-time annual salary for SLPs who were primarily administrators or supervisors but who saw some patients was $92,000. Facility was not a predictor of salaries for this group of SLPs ($p = .084$).

The median full-time annual salary for SLPs who were exclusively administrators or supervisors was $105,000. Too few SLPs who were exclusively administrators or supervisors were employed in any facility type to report those data.
Median full-time salaries for SLPs who were paid primarily an annual salary ranged from $77,000 for those who worked in outpatient clinics or offices to $91,000 for SLPs employed in SNFs ($p = .000; see Figure 3 and Appendix, Table 2).

Note. $n = 481.

Median full-time salaries for SLPs who were paid primarily an annual salary was highest in the West ($90,000) and lowest in the Northeast ($79,830; see Figure 4).

Note. $n = 454.
Full-time salaries for SLPs who were paid primarily an annual salary increased with years of experience, although not in a straight line. Median annual salaries ranged from $64,000 for SLPs with 1–3 years of experience to $95,000 for those with 25 or more years of experience ($p = .000; see Figure 5).

</tbody>
</table>

Note. $n = 412.$

Two variables did not predict salary amounts:
- Population density ($p = .281$)
- Number of employers SLPs worked for, when limited to one or two employers ($p = .454$).

Also, too few respondents with a doctoral degree ($n = 14$) provided their annual salary to report differences related to highest degree earned.
Survey Notes and Methodology

The ASHA SLP Health Care Survey has been fielded in odd-numbered years since 2005 to gather information of interest to the profession. Members, volunteer leaders, and staff rely on data from the survey to better understand the priorities and needs of SLPs.

The survey was fielded electronically on May 20, May 27, and June 3, 2021, to a random sample of 10,000 ASHA-certified SLPs who were employed in health care settings in the United States, and the sample was stratified by type of facility. Small groups, such as pediatric hospitals, were oversampled. Weighting was used when presenting data to reflect the actual distribution of SLPs in each type of facility.

The sample was divided randomly into two groups, with one group receiving an additional question about whether their current work includes private practice, early intervention, or telepractice.

Of the original 10,000 SLPs in the sample, 157 opted out, 83 had unusable email addresses, and 196 were not currently employed in health care. The actual number of respondents was 1,671, resulting in a 17.5% response rate. The results presented in this report are based on responses from those 1,671 individuals.

Response Rate

Survey Reports

Results from the ASHA 2021 SLP Health Care Survey are presented in a series of reports at www.asha.org:

- Survey Summary
- Caseload Characteristics
- Workforce
- Practice Issues
- Annual Salaries
- Hourly and Per-Home-Visit Wages
- Survey Methodology, Respondent Demographics, and Glossary
