Table

Table 1: Off-the-Clock Work .............................................................. 3
The American Speech-Language-Hearing Association (ASHA) conducted a survey of speech-language pathologists (SLPs) in the spring of 2021. We designed the survey to provide information about health care–based service delivery and to update and expand information gathered during previous SLP Health Care Surveys. We presented the results in a series of reports.

This report addresses only questions on the survey pertaining to hourly and per-home-visit wages. We drew data from six types of health care facilities: general medical, Veterans Affairs (VA), military, long-term acute care (LTAC), or university hospitals; home health agencies or clients’ homes; outpatient clinics or offices; pediatric hospitals; rehabilitation (rehab) hospitals; and skilled nursing facilities (SNFs).

**Highlights**

**Hourly**
- 54% of SLPs received an hourly wage.
- 64% of hourly wage earners worked full time.
- Median hourly wages were as follows:
  - $48.00 for SLPs who worked part time
  - $42.00 for SLPs who worked full time
- Highest hourly wages were as follows:
  - $51.00 for SLPs who worked part time in home health agencies or clients’ homes
  - $47.44 for SLPs who worked full time in home health agencies or clients’ homes
- For SLPs who worked full time, highest median hourly wages were in the West ($47.44).

**Per Home Visit**
- 10% of SLPs received a per-home-visit wage.
- 51% of per-home-visit wage earners worked full time.
- 56% of per-visit SLPs typically worked off the clock daily.
- The median per-home-visit wage was $65.00.
- The median per-home-visit wage was highest in the West ($75.00).
The SLPs who responded to the survey varied by salary basis (annual/hourly/per visit) and status (full time/part time). In addition, differences in function, facility, region of the country, and other similar characteristics had an impact on their wages.

Of the SLPs who were employed full- or part time, 54% reported that they worked for an hourly wage, 36% received an annual salary, and 10% received a per-home-visit wage (see Figure 1 and Appendix, Table 1).

Note. n = 1,574.

SLPs in home health agencies or clients’ homes (49%) were more likely to receive a per-home-visit wage than an annual salary or hourly wage. SLPs in general medical, VA, military, LTAC, or university hospitals (61%) and in SNFs (83%) were more likely to receive an hourly wage. SLPs in pediatric hospitals (59%) were more likely to receive an annual salary. Salary basis for SLPs in outpatient clinics or offices and in rehab hospitals were split nearly evenly between annual salary and hourly wage (see Appendix, Table 1).
Among all survey respondents, 72% worked full time, but this varied by the type of pay SLPs received: 92% of those who received an annual salary, 64% of those who received an hourly wage, and 51% of those who received a per-home-visit wage worked full time (see Figure 2).

The remainder of this report presents data that describe the hourly wage earners and the SLPs who receive a per-home-visit wage.

SLPs who received an hourly wage worked for an average (mean) of 1.3 employers (median = 1.0; \(n = 806\)). Those who received a per-home-visit wage worked for an average of 1.7 employers (median = 1.0; \(n = 139\)).

More than half of the SLPs who were primarily clinical service providers and who received a per-home-visit wage performed off-the-clock work daily compared with fewer than one-quarter of the clinical service providers who received an hourly wage (see Table 1).

Hourly Wage

We divided most of the data for hourly wage earners into those who worked full time and those who worked part time.

We traditionally present salaries and wages in ASHA reports as a function of various demographic characteristics, such as facilities, years of experience, and region of the country. A minimum of 25 individuals in a category must have answered relevant questions in order for us to present the data.

Overall Average Wage

The overall median hourly wage was $48.00 for SLPs who worked part time and $42.00 for those who worked full time (see Appendix, Table 2).

Highest Degree

Nearly all (99%) of the hourly wage earners held a master’s as the highest degree. We cannot report the median hourly wage for doctorate holders because there were only nine of them. The median was $44.00 for the SLPs who held a master’s degree (n = 769).

Facility

Median wages for SLPs working part time ranged from $46.45 for SLPs working in SNFs to $51.00 for SLPs working in home health agencies or clients’ homes. The range of median wages for SLPs working full time was between $40.28 in rehabilitation hospitals and $47.44 in home health agencies or clients’ homes. Too few SLPs in pediatric hospitals reported hourly wages for their data to be included (see Figure 3 and Appendix, Table 2).

![Figure 3: Median Hourly Wage, by Type of Facility](image-url)

*Note. n = 784.*
The median wage was $48.00 for SLPs who were primarily clinical service providers and who worked part time and $42.00 for those who worked full time (see Appendix 3).

The median wage was $50.00 for SLPs who were primarily administrators or supervisors but who saw some patients and who worked full time ($n = 25). Too few ($n = 6) worked part time to be able to report their data.

Too few SLPs who were exclusively administrators or supervisors received an hourly wage ($n = 3).

Median hourly wages were lowest in the Midwest for SLPs working part time ($43.00) and full time ($39.00). Highest hourly wages were in the West for SLPs working full time ($47.44) and in the Northeast for those working part time ($52.00; see Figure 4).

For part-time SLPs, median wages were slightly higher in suburban areas than in other areas:
- $47.50 in city/urban areas
- $49.32 in suburban areas
- $45.00 in rural areas

For full–time SLPs, median hourly wages showed little variability:
- $43.00 in city/urban areas
- $41.00 in suburban areas
- $41.20 in rural areas
We divided years of experience into 5-year increments rather than the 3-year increments of previous years because of the small number of respondents. Median hourly wages were higher at each level of experience for part-time SLPs than they were for full-time SLPs. The difference in median wages between full- and part-time SLPs was narrowest for those with 26 or more years of experience ($1.47; see Figure 5).

**Figure 5: Median Hourly Wage, by Years of Experience**

- **Full time**
- **Part time**

*Note. n = 753.*
Ten percent of participants in this survey were paid on a per-home-visit basis (see Figure 1).

Their overall median per-home-visit wage was $65.00 (n = 156).

Only two types of facilities had sufficient numbers of respondents to allow reporting of per-home-visit wages. The median per-home-visit wage was $65.00 (n = 127) in home health agencies or clients’ homes and $55.00 in outpatient clinics or offices (n = 26).

Only SLPs who were primarily clinical service providers had a sufficiently large number of respondents to report their median per-home-visit wage: $65.00 (n = 149).

There were sufficient responses from three geographic regions to present data. The median per-home-visit wage was highest in the West ($75.00; see Figure 6).

<table>
<thead>
<tr>
<th>Geographic Region</th>
<th>Median Per-Home-Visit Wage</th>
</tr>

<tbody>
<tr>
<td>Northeast</td>
<td>$57.11</td>
</tr>
<tr>
<td>South</td>
<td>$65.00</td>
</tr>
<tr>
<td>West</td>
<td>$75.00</td>
</tr>
</tbody>
</table>

Note. n = 130.

Population density had no effect on median per-home-visit wages:
- $65.84 in city/urban areas
- $65.00 in suburban areas

Too few respondents provided per-home-visit wages for some predictors (i.e., years of experience and doctoral degree holders), so those results cannot be presented.
We have fielded the ASHA SLP Health Care Survey in odd-numbered years since 2005 to gather information of interest to the profession. Members, volunteer leaders, and staff rely on data from the survey to better understand the priorities and needs of SLPs.

The survey was fielded electronically on May 20, May 27, and June 3, 2021, to a random sample of 10,000 ASHA-certified SLPs who were employed in health care settings in the United States. Half of each group was randomly assigned to a random sample to receive an additional question about whether their current work includes private practice, early intervention, or telepractice.

The sample was a random sample, stratified by type of facility. Small groups, such as pediatric hospitals, were oversampled. Weighting was used when presenting data to reflect the actual distribution of SLPs in each type of facility.

Of the original 10,000 SLPs in the sample, 157 opted out, 83 had unusable email addresses, and 196 were not currently employed in health care. The actual number of respondents was 1,671, resulting in a 17.5% response rate. The results presented in this report are based on responses from those 1,671 individuals.

Results from the ASHA 2021 SLP Health Care Survey are presented in a series of reports at www.asha.org:

- Survey Summary
- Workforce
- Practice Issues
- Caseload Characteristics
- Annual Salaries
- Hourly and Per-Home-Visit Wages
- Survey Methodology, Respondent Demographics, and Glossary

You may find salary data in other sources, such as state associations and state departments of labor. Suggested websites include the following:

www.bls.gov/ooh/healthcare/speech-language-pathologists.htm

www.bls.gov/oes/current/oes291127.htm

State-level salary data are available by searching on occupational category 29-1127 at www.bls.gov/oes/2020/may/oessrcst.htm.

For additional information regarding the ASHA 2021 SLP Health Care Survey, please contact Monica Sampson, director, Health Care Services in Speech–Language Pathology, 800-498-2071, ext. 5686, msampson@asha.org.

ASHA would like to thank the SLPs who completed the ASHA 2021 SLP Health Care Survey. Reports like this one are possible only because people like you participate.

Is this information valuable to you? If so, please accept invitations to participate in other ASHA-sponsored surveys and focus groups. You are the experts, and we rely on you to provide data to share with your fellow members. ASHA surveys benefit you.
