

February 26, 2020

The Honorable Gary Chism, Chairman
House Insurance Committee
Room: 400-G
P. O. Box 1018
Jackson, MS 39215

RE: HB 424

Dear Chairman Chism and Members of the Committee:

On behalf of the American Speech-Language-Hearing Association, I write to express support for HB 424, legislation requiring insurance policies to provide coverage for hearing aids and services for deaf and hearing-impaired children under 21 years of age.

The American Speech-Language-Hearing Association (ASHA) is the national professional, scientific, and credentialing association for 211,000 members and affiliates who are audiologists; speech-language pathologists; speech, language, and hearing scientists; audiology and speech-language pathology support personnel; and students. Over 1,800 ASHA members reside in Mississippi.

Communication skills are central to a successful and productive life for all Americans. Communication disorders impact education, employment, and the well-being of 1 in 6 Americans and their families.¹

House Bill 424 provides critical support for reducing instances of untreated hearing loss in children. Studies have linked untreated hearing loss to many social and economic factors, including depression, withdrawal from social situations, reduced alertness and increased risk to personal safety, impaired memory and ability to learn new tasks, reduced job performance and earning potential, and diminished psychological and overall health.² Approximately 15% of school-age children have some degree of hearing loss in one or both ears, with 5.4% (or about 1 in 20) having less severe or unilateral hearing loss.³ Academic achievement and social functioning are significantly impacted by even a mild to moderate hearing loss, which may bring about difficulty in learning and building important interpersonal skills necessary to healthy self-esteem. In fact, over one-third of children with less severe or unilateral hearing loss are projected to fail at least one grade or will require additional educational support, which is estimated to cost the educational system over \$5.5 billion.⁴

Academic Achievement

- Children with hearing loss have difficulty with all areas of academic achievement, especially reading and mathematical concepts.
- Children with mild to moderate hearing loss, on average, achieve one to four grade levels lower than their peers with normal hearing unless appropriate management occurs.

- Children with severe to profound hearing loss usually achieve skills no higher than the third or fourth grade level unless appropriate educational intervention occurs early.
- The gap in academic achievement between children with normal hearing and those with hearing loss usually widens as they progress through school.
- The level of achievement is related to parental involvement and the quantity, quality, and timing of the support services children receive.^{5, 6, 7}

Social Functioning

- Children with severe to profound hearing loss often report feeling isolated, without friends, and unhappy in school, particularly when their socialization with other children with hearing loss is limited.
- These social problems appear to be more frequent in children with a mild or moderate hearing loss than in those with a severe to profound loss.^{8, 9}

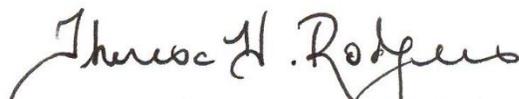

Financial Impact

The lifetime educational cost of hearing loss (more than 40 dB permanent loss without other disabilities) has been estimated at \$115,600 per child.¹⁰

HB 424, sponsored by Representative Massengill, will benefit Mississippians under age 21 who do not have coverage for hearing aids by requiring all individual and group health insurance policies regulated by the state to provide coverage.

Thank you for your consideration of ASHA's position on HB 424. If you or your staff have any questions, please contact Tim Boyd, ASHA's director of state health care and education affairs, at tboyd@asha.org.

Sincerely,

Theresa H. Rodgers, MA, CCC-SLP
2020 ASHA President
